

Criteria	max mark
Appearance, presentation, readability and interest value - Does the poster attract your attention? - Would you want to read this if you saw it posted on a wall in the EGS building? - Is it easy to read? - Is it succinct? - Is the presentation logical, clear and compelling?	15
Title and topic - Title accurate reflection of topic - Real climate extreme event - In Africa	3
Introduction, Background, Setting - Multiple sources used - Significant impact demonstrated - Note particularly affected communities, sectors, or ecosystems.	10
Data & Methods - A range of data sources consulted - Relevant data are used - Clarity on the source of all data used - Figure sources clearly identified - Data analysis clearly documented - Appropriate data manipulation demonstrated - Clarity on reference periods for climatology/anomalies	15
Weather Systems and Climate conditions - Relevant weather systems clearly identified - All relevant variables considered at appropriate atmospheric levels - Appropriate graphical representations of system	15
Variables and Scales - Appropriate timescale and variables indicated or implied - Relevant quantitative data included - Extremeness of event graphically and quantitatively demonstrated - Reference climate appropriately determined and represented - Impacts linked to extreme variable values	15

Link to climate variability and change - Student demonstrates engagement with the relationship between the event and modes of variability or impacts of climate change covered in the course	5
Clear link back to fundamental concepts - Either a thermodynamic or dynamic process is linked to the event, or the impact of climate change on the process is tied to likely future change in the event characteristics - Sound arguments made - Clearly demonstrates the link between the process and the event considered	10
Conclusion - Statement of key findings made - Features prominently	6
References - In-text references for key findings (need not be in author-date format; can use e.g. footnote style) - Clear reference list (may be in small font) - consistent style used - DOI or links included wherever possible	6
