

Welcome to BI-2034 2026!

The course will be taught in English. You can find information here: <https://www.ntnu.edu/studies/courses/BI2034#tab=omEmnet>

The course begins on **18th of August** (detailed schedule will be provided later). The course consists of lectures, field course, lab work and project work.

The field courses takes place **26th-29th of August**. Each student should choose if they want to go to the Terrestrial or the Freshwater field course. The Terrestrial field course is held at Sletvik field station, and the Freshwater at Snåsa field station. Snåsa can only accommodate 12 students. We will assign you to one of the two groups at the start of the course. Attendance on the field course parts is compulsory and will form the basis for your further project work on the course. Practical information on the field courses will be provided at the start of the semester.

During the course, we will have instructions and exercises on statistics and writing scientific reports. The main part of the course is project work which will be done in groups of four-six students. This includes planning a project, collecting data, processing these, and writing up the results as a short scientific paper, and presenting the project to the rest of the class. This work will train you in the skills required for undertaking Master projects or large projects in the workplace.

It is very important that you attend the course from the very start so that you can get a place on one of the two field courses. **If you can't join the field course, you can't get the course approved.** In case you are listed as a participant here on Canvas, but you know you will not participate, please let us know **as soon as possible** and make sure to sign off the course. Thank you!

We look forward to meeting you all in August!
